01 INTRODUCTION TO RELEASE NOTES

This edition of *Release Notes* describes the Release 418 family of NVIDIA[®] Quadro[®], NVS[™], Tesla[®], and Quadro Notebook Drivers for Microsoft[®] Windows[®] 10. NVIDIA provides these notes to describe performance improvements and bug fixes in each documented version of the driver.

Structure of the Document

This document is organized in the following sections:

- ▶ “Release 418 Driver Changes” on page 2 gives a summary of changes, and fixed and open issues in this version.
- ▶ “The Release 418 Driver” on page 26 describes the NVIDIA products and languages supported by this driver, the system requirements, and how to install the driver.
- ▶ “NVIDIA Tesla Compute Cluster Mode” on page 35 describes the Tesla Compute Cluster mode.

Changes in this Edition

This edition of the *Release Notes* for Windows 7 and later includes information about NVIDIA graphics driver version 426.50, and lists changes made to the driver since version 411.63.

Note: Driver versions built from release branch 418 now begin with 425. For future reference, NVIDIA driver versions 425.xx to 429.xx are built from the release branch 418.

These changes are discussed beginning with the chapter “Release 418 Driver Changes” on page 2.

02 RELEASE 418 DRIVER CHANGES

This chapter describes open issues for version 426.50, and resolved issues and driver enhancements for versions of the Release 418 driver up to version 426.50.

Note: Driver versions built from release branch 418 now begin with 425. For future reference, NVIDIA driver versions 425.xx to 429.xx are built from the release branch 418.

The chapter contains these sections:

- ▶ “Version 426.50 Highlights” on page 3
- ▶ “Advanced Instructions for this Release” on page 8
- ▶ “Driver Security” on page 14
- ▶ “Changes in Version 426.00” on page 16
- ▶ “Changes in Version 425.31” on page 17
- ▶ “Changes in Version 419.67” on page 18
- ▶ “Changes in Version 418.81” on page 19
- ▶ “Issues Not Caused by NVIDIA Drivers” on page 20
- ▶ “Issues Not Caused by NVIDIA Drivers” on page 18
- ▶ “Known Product Limitations” on page 21

Version 426.50 Highlights

This section provides highlights of version 426.50 of the NVIDIA Release 418 Driver for Windows 10.

- ▶ Existing Support
- ▶ What's New in Version 426.50
- ▶ What's New in Release 418
- ▶ Discontinued and Unsupported Features
- ▶ Limitations in This Release

Existing Support

- ▶ This release supports the following APIs:
 - Open Computing Language (OpenCL™ software) 1.2 for NVIDIA® Kepler™ and later GPUs
 - OpenGL® 4.6
 - Vulkan® 1.1
 - DirectX 11
 - DirectX 12
 - NVIDIA® CUDA® 10.1
- ▶ This driver installs **nView Desktop Manager** version 149.77.

What's New in Version 426.50

- ▶ Added security updates for driver components.
See the [NVIDIA Security Bulletin 4996](#) for details.
See also the section “[Driver Security](#)” on [page 14](#) for actions to take to mitigate vulnerabilities.
- ▶ See also [What's New in Release 418](#).

What's New in Release 418

Quadro ODE Driver

Release 418 is an 'Optimal Drivers for Enterprise'(ODE) branch release. ODE drivers are designed and tested to provide long-term stability and availability, making these drivers ideal for enterprise customers and other users who require application and hardware certification from ISVs and OEMs respectively.

New Features

- ▶ Added support for Microsoft Windows 10 October 2018 Update (Version 1809).
- ▶ Added support for CUDA 10.1
- ▶ Added security updates.

See also the section [“Driver Security” on page 14](#) for actions to take to mitigate vulnerabilities.

- Version 426.32 added security updates for driver components.

See the [NVIDIA Security Bulletin 4907](#) for details.

- Version 426.00 adds security updates for driver components.

See the [NVIDIA Security Bulletin 4841](#) for details.

- Version 425.51 adds security updates for driver components.

See the [NVIDIA Security Bulletin 4797](#) for details.

- Version 419.17, added security updates for driver components.

See the [NVIDIA Security Bulletin 4772](#) for details.

- ▶ Added support for DirectX Raytracing (DXR) on NVIDIA Pascal generation GPUs and later.

Requires Windows 10 and minimum 6 GB frame buffer.

- ▶ NVIDIA Control Panel

Updated to version 8.1.950. Added new *Developer->Manage GPU Performance Counters* controls.

- ▶ Smart Clone mode (*NVIDIA Control Panel: Display->Set up multiple display->Set Smart Clone with*) is now supported on Windows 10.

- ▶ Tiled monitors are now treated as a single display so that Mosaic topologies can be configured and disabled more reliably.

- ▶ Video Codec SDK 9.0 (Released Feb 11, 2019)

Included Features

- Supports NVENC/NVDEC on NVIDIA Turing GPUs
- NVENC API has been updated to support HEVC B-frames on Turing GPUs.

- NVENC API adds the capability to output the encoded bitstream, and motion vectors from Motion-Estimation-only mode to video memory. This avoids the overhead of copying the output from system to video memory for processing pipelines operating directly on video memory.
- NVENC API now accepts CUArray as an input buffer. The SDK contains a sample application to demonstrate how to feed Vulkan surface to NVENC using Vulkan-CUDA interop.

More information: <https://developer.nvidia.com/nvidia-video-codec-sdk>

► Video HVEC Support

- Added H.265 B-frame support for NVIDIA Turing GPUs
- Added H.265 444 Decode support for NVIDIA Turing GPUs

► Optical Flow SDK 1.0 (Released Feb 11, 2019)

This is a new API for Optical Flow and stereo disparity hardware engine, available on Turing GPUs.

More information: <https://developer.nvidia.com/opticalflow-sdk>

► Added support for Optix 6.0.

Support requires NVIDIA Maxwell or later GPUs.

Limitations Under Windows 10

Cross-adapter Clone Mode

Under Windows 10, clone mode across graphics processors is handled by the Windows OS, and not by the NVIDIA driver. Consequently, there are no controls for cross-adapter clone mode in the NVIDIA Control Panel under Windows 10.

Functionality of some display controls in the NVIDIA Control Panel may be affected if cross-adapter clone mode is enabled through the Windows Control Panel. In this case, use the Windows Control Panel to adjust display settings.

Optimus Systems

Because cross-adapter clone mode is handled by the Windows 10 OS, there are no display controls in the NVIDIA Control Panel if no display is connected to the NVIDIA GPU.

Discontinued and Unsupported Features

Advance Notification of Future Discontinued Support

► 3D Vision

After Release 418, the NVIDIA Professional Drivers for Windows will no longer support the following 3D Vision technologies and features:

- NVIDIA 3D Stereoscopic Driver
- NVAPI-based stereo APIs for Direct3D applications.

► Kepler Notebook GPUs

After Release 418, the NVIDIA Professional Drivers for Windows will no longer support Quadro notebook products based on the Kepler GPU architecture.

Discontinued Support in this Release

► 32-bit Operating Systems

Beginning with Release 396, NVIDIA is no longer releasing drivers for 32-bit operating systems for any GPU architecture.

► NVS 310/315

Beginning with Release 396, the NVIDIA driver no longer supports the following NVS products:

- NVS 315
- NVS 310

► Quad-Buffered Stereo

Beginning with Release 396, the NVIDIA Professional Drivers for Windows no longer supports select quad-buffered stereo features. See the [NVIDIA Knowledge Base Article](#) for details.

Limitations in This Release

The following features are not currently supported or have limited support in this driver release:

External Graphics

► External GPU Surprise Removal

Not all applications have been designed to address surprise removal of the external GPU; disconnection of the external GPU while applications are running is not advised.

► Mixed GeForce/Quadro Products

Mixed GeForce/Quadro products are supported (Geforce GPU + Quadro eGPU, or Quadro GPU + Geforce eGPU), but requires installation of the GeForce driver package. The Quadro package does not install GeForce drivers.

Deep Color (10 bpc) on HDR-Capable Monitors Under Windows 10 RS2 and RS3

Depending on the monitors you have connected, Windows may initially set the color depth to 8-bpc (bits per channel). You can then enable deep color (10bpc) through the NVIDIA Control Panel. If you enable deep color on HDR-capable monitors, the screen

may become blank due to the current SDR/HDR (standard dynamic range/high dynamic range) management policies in Windows 10 RS2 and RS3. In this event, the driver will revert back to the 8-bpc color space.

Experimental OpenCL 2.0 Features

Select features in OpenCL 2.0 are available in the driver for evaluation purposes only. The following are the features as well as a description of known issues with these features in the driver:

► Device side enqueue

- The current implementation is limited to 64-bit platforms only.
- OpenCL 2.0 allows kernels to be enqueued with `global_work_size` larger than the compute capability of the NVIDIA GPU. The current implementation supports only combinations of `global_work_size` and `local_work_size` that are within the compute capability of the NVIDIA GPU.

The maximum supported CUDA grid and block size of NVIDIA GPUs is available at <http://docs.nvidia.com/cuda/cuda-c-programming-guide/index.html#compute-capabilities>. For a given grid dimension, the `global_work_size` can be determined by CUDA grid size x CUDA block size.

- For executing kernels (whether from the host or the device), OpenCL 2.0 supports non-uniform ND-ranges where `global_work_size` does not need to be divisible by the `local_work_size`. This capability is not yet supported in the NVIDIA driver, and therefore not supported for device side kernel enqueues.

► Shared virtual memory

- The current implementation of shared virtual memory is limited to 64-bit platforms only.

Advanced Instructions for this Release

This section clarifies instructions for successfully accomplishing the following tasks:

- ▶ Turning Off V-Sync to Boost Performance
- ▶ NVIDIA Application Configuration Engine (ACE)
- ▶ Using the WDDM Driver Model with Tesla GPU GOMs
- ▶ SLI Multi-OS – GPU Assignment in System Virtualization

Turning Off V-Sync to Boost Performance

To get the best benchmark and application performance measurements, turn V-Sync off as follows:

- 1 Open the NVIDIA Control Panel and make sure that *Advanced Settings* is selected from the control panel tool bar.
- 2 From the *Select a Task* pane, under 3D Settings, click **Manage 3D Settings**, then click the Global Settings tab.
- 3 From the Global presets pull-down menu, select **Base profile**.
- 4 From the Settings list box, select **Vertical sync** and change its value to **Force off**, then click **Apply**.
- 5 From the Global presets pull-down menu, select **3D App - Default Global Settings** (the driver's default profile) or use the application profile that matches the application you are testing, then click **Apply**.

Be sure to close the NVIDIA Control Panel completely —leaving it open will affect benchmark and application performance.

NVIDIA Application Configuration Engine (ACE)

This driver includes the NVIDIA Application Configuration Engine (ACE), which automatically detects the workstation application and configures the appropriate profile settings in the NVIDIA Control Panel.

See the *NVIDIA Quadro Professional Drivers: NVIDIA Control Panel Quick Start Guide* for more information about this feature.

Using the WDDM Driver Model with Tesla GPU GOMs

Tesla GPU Operation Modes

Tesla K20X and K20 GPU Accelerators offer the ability to specify the GPU operation mode using NV-SMI/NVML. (refer to: <https://developer.nvidia.com/nvidia-management-library-nvml>).

By setting the GPU operation mode, developers can selectively turn off certain features in the GPU to get the best performance per watt for certain workloads.

The following are the supported GOMs:

- ▶ **Compute-Only:** For running compute tasks only.
By default the Tesla K20X and K20 accelerator boards ship in this mode.
- ▶ **Low-Double Precision:** For graphics applications that don't require high bandwidth double precision.
This is recommended for workloads that are not sensitive to double precision but at the same time need graphics capabilities.
- ▶ **All On:** This is recommended only when the workload needs full double precision as well as graphics capabilities.

WDDM and TCC Driver Models

Along with the GPU operation mode, the developer needs to select the compatible driver model for the Tesla K20X and K20.

- ▶ Tesla Compute Cluster (**TCC**): Optimized for running compute workloads.
- ▶ Windows Device Driver Model (**WDDM**): Designed for graphics application and not recommended for compute workloads.

Compatibility Between GOM and Driver Models

Table 1 shows which GPU operation modes are compatible with which driver models.

Table 1 GOM and Driver Model Compatibility

GOM	TCC Driver Model	WDDM Driver Model	Use Case Support
All On	YES	YES	All use cases are supported.
Compute-Only	YES	NO	The following are unsupported : X11 and those that require X11 (GLInterop, OCL conformance and VIPER) 32-bit Windows OS
Low Double Precision	YES	YES	All use cases supported.

The compute-only GOM is supported only on the TCC driver model, while the WDDM driver model supports only GOM modes that enable graphics.

The compute-only GOM and WDDM are incompatible and should not be used simultaneously.

The Tesla K20 Active Accelerators for workstations ship in “compute-only” mode and cannot be modified. Therefore, use only the TCC driver model with these products.

Using the WDDM Driver Model

To use the WDDM driver model with Tesla K20x and K20 GPU Accelerators for servers, first switch the GOM mode from compute-only to All On, then switch from TCC to WDDM.

Do not attempt to specify the driver model by editing the registry. Doing so can result in compute-only GOM and WDDM being configured simultaneously, which might require a clean installation of the driver to fix.

Always use NVIDIA-provided tools to specify a processing mode or to switch between driver models. Such tools include nvidia-smi or the NVIDIA Control Panel->Manage Maximus Settings page. These tools provide warnings in the case of a conflict.

SLI Multi-OS - GPU Assignment in System Virtualization

On systems with two or more graphics cards installed, this driver supports a hypervisor's ability to directly assign GPUs to guest virtual machines (VMs). This direct assignment allows each guest VM to run on their own operating system with their own GPU and driver. The assignment allows full GPU performance and functionality in the guest VM.

Hardware Platform Requirements

To make use of GPU passthrough with virtual machines running Windows and Linux, the hardware platform must support the following features:

- ▶ A CPU with hardware-assisted instruction set virtualization: Intel VT-x or AMD-V.
- ▶ Platform support for I/O DMA remapping.

On Intel platforms the DMA remapper technology is called Intel VT-d.

On AMD platforms it is called AMD IOMMU.

Support for these feature varies by processor family, product, and system, and should be verified at the manufacturer's website.

Supported Hypervisors

The following hypervisors are supported:

Hypervisor	Notes
Citrix XenServer	Version 6.0 and later.
VMware vSphere (ESX / ESXi)	Version 5.1 and later.
Parallels Workstation Extreme	Version 4 and later

Supported Graphics Cards

The following GPUs are supported for device passthrough:

GPU Family	Boards supported
Turing	<u>Quadro</u> : RTX 8000, RTX 6000, RTX 5000, RTX 4000
Volta	<u>Quadro</u> : GV100 <u>Tesla</u> : V100
Pascal	<u>Quadro</u> : P2000, P4000, P5000, P6000, GP100 <u>Tesla</u> : P100, P40, P4

GPU Family	Boards supported
Maxwell	<u>Quadro</u> : K2200, M2000, M4000, M5000, M6000, M6000 24GB <u>Tesla</u> : M60, M6
Kepler	<u>Quadro</u> : K2000, K4000, K4200, K5000, K5200, K6000 <u>Tesla</u> : K10, K20, K20x, K20Xm, K20c, K20s, K40m, K40c, K40s, K40st, K40t, K80

Notes and Known Issues

VMware

- PCI I/O hole may need to be changed for Windows 64-bit VMs.

Windows 64-bit VMs may require that you edit the VM configuration file to configure a larger PCI I/O hole for the GPU.

- Access Control Services is required on some switches.

Starting with ESX 5.0 Update 1, Access Control Services (ACS) is required on any switches in the PCIe hierarchy above a PCIe device that is to be used for passthrough. If ACS is not present, ESX will not allow the device to be assigned directly to a VM.

To allow assignment of devices below switches that do not support ACS, you can disable the ACS check as follows:

```
esxcfg-advcfg -k true disableACSCheck
```

- Configuring passthrough to a Windows Server 2008R2 VM.

The VMware WDDM driver must be manually installed on Windows Server 2008 R2.

Follow the steps provided at <http://communities.vmware.com/message/1423263#1425288>.

- MSI translation must be disabled for ESXi 5.1 and 5.5.

Blue-screen crashes may occur on VMs with assigned GPUs if MSI is initially enabled for passthrough devices.

To avoid this issue, disable MSI translation by setting *pciPassthru0.msiEnabled* = "FALSE" in the VM's VMX file.

Disabling MSI translation is not needed for ESXi 6.0 and later.

Citrix Xenserver

- XenServer 6.1 workaround for 64-bit MMIO failures on PCI passthrough.

Dom0 kernel may relocate GPU BARs to an invalid location immediately beyond the end of physical RAM. There are two workaround options to address this condition:

Workaround option #1: Add 'pci=use_crs' to the kernel parameters by running the following command in Dom0:

```
/opt/xensource/libexec/xen-cmdline --set-dom0 pci=use_crs
```

Workaround option #2: Install the hotfix provided by Citrix at <http://support.citrix.com/article/CTX137645>):

Driver Security

Follow these safe computing practices:

- ▶ Only download or execute content and programs from trusted third parties.
- ▶ Run your system and programs with the least privilege necessary. Users should run without administrator rights whenever possible.
- ▶ When running as administrator, do not elevate UAC privileges for activities or programs that don't need them.

This section describes additional actions to take to mitigate specific known security issues. For guidance regarding driver or software package updates to address security concerns, visit the [NVIDIA Product Security](#) page.

Restricting/Enabling Access to GPU Performance Counters

The NVIDIA graphics driver contains a vulnerability (CVE-2018-6260) that may allow access to application data processed on the GPU through a side channel exposed by the GPU performance counters. GPU performance counters are needed by developers in order to use NVIDIA developer tools such as CUPTI, Nsight Graphics, and Nsight Compute. In order to address CVE-2018-6260 the driver (starting with version 419.67) automatically disables access for non-admin users. For more information about CVE-2018-6260 visit the [NVIDIA Security Bulletin 4772](#).

Enabling Access to GPU Performance Counters Using the NVIDIA Control Panel

Access to GPU performance counters can be enabled for non-admin users who need to use NVIDIA developer tools. Enabling access to GPU performance counters can be accomplished through the NVIDIA Control Panel->*Developer*->*Manage GPU Performance Counters* page. Refer to the *Developer*->*Manage GPU Performance Counters* section of the NVIDIA Control Panel Help for instructions.

Note: Access to GPU performance counters should be kept disabled for non-admin users who do not need to use NVIDIA developer tools.

Restricting/Enabling Access to GPU Performance Counters Across an Enterprise Using Scripts

Enterprise administrators can use scripts to programmatically apply the settings. The scripts should incorporate the registry key information provided below to automate the deployment.

CAUTION: These instructions should be performed only by enterprise administrators. Changes to the registry must be made with care. System instability can result if performed incorrectly.

```
[HKLM\SYSTEM\CurrentControlSet\Services\nvlddmkm\Global\NVTweak]
Value: "RmProfilingAdminOnly"
Type: DWORD
Data: 00000001
```

The data value 1 restricts access to admin users, whereas data value 0 allows access to all users.

A system reboot is required for the changes to take effect.

Changes in Version 426.00

The following sections list the important changes and the most common issues resolved in this driver version.

Fixed Issues

- [Assimilate Scratch]: The application may crash due to a kernel exception in the NVIDIA OpenGL driver.

Changes in Version 425.31

The following sections list the important changes and the most common issues resolved in this driver version.

Fixed Issues

- [SLI][Adobe]: With SLI enabled, artifacts may appear in Adobe applications.

Changes in Version 419.67

The following sections list the important changes and the most common issues resolved in this driver version.

Fixed Issues

- ▶ [Warp and Blend]: The system hangs and then crashes after enabling warp-and-blend or per-pixel intensity feature on a custom resolution.
- ▶ [Adobe]: Artifacts may appear in Adobe applications (fixed for single-GPU case). [2533911]

Changes in Version 418.81

The following sections list the important changes and the most common issues resolved in this driver version.

Fixed Issues

- [Quadro P1000/P2000]: Implemented and enabled TCC for the referenced products in order to support Windows 10 RDMA.

Issues Not Caused by NVIDIA Drivers

This section lists issues that are not due to the NVIDIA driver as well as features that are not meant to be supported by the NVIDIA driver for Windows 10.

- ▶ [“Application Issues” on page 20](#)

Application Issues

- ▶ [3ds Max 2017]: DirectX 9, Mode Texture of some models disappears after some time if no operation (such as zoom, pan, or rotate) is performed on the model.
- ▶ [Quadro K2200][Bunkspeed Shot 2014]: Render Argument exception occurs in Accurate Mode, and Internal Rendering Error occurs with Fast Mode.

Quadro K2200/K60 are not supported by Bunkspeed software.

- ▶ Quadro 6000: OpenCL/OpenGL interoperability performance suffers with clEnqueueReleaseGLObjects.

To avoid this issue, use CUDA.

Known Product Limitations

This section describes problems that will not be fixed. Usually, the source of the problem is beyond the control of NVIDIA. Following is the list of problems and where they are discussed in this document:

- ▶ “System Should not Enter Sleep/Hibernate Mode With SDI Capture in Progress” on page 21
- ▶ “Once Installed, the SDI Capture Driver Release Must Always Match the Graphics Driver” on page 22
- ▶ “Some APIs do not Report Total Available Graphics Memory Correctly” on page 22
- ▶ “Using HDMI/DisplayPort Audio with Displays that have a High Native Resolution” on page 23
- ▶ “Using HDMI/DisplayPort Audio in Dualview or Clone Mode Configurations” on page 24
- ▶ “GPU Runs at a High Performance Level (full clock speeds) in Multi-display Modes” on page 24
- ▶ “Aero Must be Enabled for Windowed SLI AFR Mode Under Windows 7” on page 24
- ▶ “SLI Connector Requirement on NVIDIA Quadro SLI Cards” on page 24
- ▶ “Applying Workstation Application Profiles” on page 25

System Should not Enter Sleep/Hibernate Mode With SDI Capture in Progress

SDI capture programs will become non-responsive upon resume from sleep or hibernate modes.

This is not a typical use case, so power management tests should not be performed when testing SDI.

Once Installed, the SDI Capture Driver Release Must Always Match the Graphics Driver

To use the Quadro SDI Capture card, you need to install the NVIDIA WDM driver for the Quadro SDI Capture card after installing the Quadro professional driver. The WDM driver version must be from the same branch as the installed NVIDIA graphics driver.

If at a later time you install a different Quadro professional driver version—for example, when upgrading from a Release 260 driver to a Release 265 driver—you must reinstall the WDM driver from the same driver branch as well—in this example, Release 265.

You must install the updated WDM driver even if remove the SDI Capture card and uninstall the WDM driver. Portions of the old WDM driver remain on the system, and the resulting mismatch with the updated graphics driver results in a faulty driver installation. Installing a matching WDM driver corrects this issue.

Some APIs do not Report Total Available Graphics Memory Correctly

Background-TAG Memory

In the Windows Display Driver Model (WDDM), Total Available Graphics (TAG) memory is reported as the sum of

- Dedicated Video Memory (video memory dedicated for graphics use)
- Dedicated System Memory (system memory dedicated for graphics use), and
- Shared System Memory (system memory shared between the graphics subsystem and the CPU).

The values for each of these components are computed according to WDDM guidelines when the NVIDIA Display Driver is loaded.

Issue

NVIDIA has found that some TAG-reporting APIs represent video memory using 32-bits instead of 64-bits, and consequently do not properly report available graphics memory when the TAG would otherwise exceed 4 gigabytes (GB). This results in under reporting of available memory and potentially undesirable behavior of applications that rely on these APIs to report available memory.

The reported memory can be severely reduced. For example, 6 GB might be reported as 454 MB, and 8 GB might be reported as 1259 MB.

NVIDIA Action for Some GeForce-based Systems

For GeForce GPUs with 2.75 GB or less of video memory, the NVIDIA display driver constrains TAG memory to just below 4 GB¹. In this scenario, the Shared System Memory component of TAG is limited first, before limiting Dedicated Video Memory.

This is a policy decision within the driver, and results in reliable reporting of sub-4 GB TAG memory.

When TAG Reporting Would Not Be Limited

For GeForce-based GPUs with more than 2.75 GB of video memory, as well as all Quadro and Tesla GPUs, the NVIDIA display driver does not constrain TAG memory reporting.

The disadvantage of constraining TAG on systems with larger amounts of video and system memory is that memory which otherwise would be available for graphics use is no longer available. Since shared system memory is limited first, driver components and algorithms utilizing shared system memory may suffer performance degradation when TAG is constrained.

Since these and similar scenarios are prevalent in many Workstation applications, the NVIDIA driver avoids constraining TAG on all Quadro and Tesla-based systems. Likewise, the driver does not constrain TAG for GeForce-based systems with more than 2.75 GB of video memory.

Using HDMI/DisplayPort Audio with Displays that have a High Native Resolution

To use HDMI/DisplayPort audio with some displays that have a native resolution higher than 1920x1080, you must set the display to a lower HD resolution.

Some HDMI TV's have a native resolution that exceeds the maximum supported HD mode. For example, TVs with a native resolution of 1920x1200 exceed the maximum supported HD mode of 1920x1080.

Applying this native mode results in display overscan which cannot be resized using the NVIDIA Control Panel since the mode is not an HD mode.

To avoid this situation and provide a better user experience, the driver treats certain TVs—such as the Viewsonic VX2835wm and the Westinghouse LVM- 37w3—as a DVI monitor when applying the native mode. Because the driver does not treat the TV as an HDMI in this case, the HDMI audio is not used.

1. The WDDM guidelines dictate minimum and maximum values for the components, but the display driver may further constrain the values that are reported (within the allowed minimum and maximum).

Using HDMI/DisplayPort Audio in Dualview or Clone Mode Configurations

Two Audio-enabled Ports

In a multi-display configuration where both HDMI/DisplayPort audio ports are enabled, only the primary display will provide the audio.

One Audio-enabled Port

In a multi-display configuration where only one audio port is enabled, such as when one display is a DVI display, then the HDMI/DisplayPort display can provide the audio whether is it the primary or secondary display.

GPU Runs at a High Performance Level (full clock speeds) in Multi-display Modes

This is a hardware limitation and not a software bug. Even when no 3D programs are running, the driver will operate the GPU at a high performance level in order to efficiently drive multiple displays. In the case of SLI or multi-GPU PCs, the second GPU will always operate with full clock speeds; again, in order to efficiently drive multiple displays. Today, all hardware from all GPU vendors have this limitation.

Aero Must be Enabled for Windowed SLI AFR Mode Under Windows 7

Windows 7 Aero must be enabled in order to achieve SLI acceleration using windowed AFR mode.

SLI Connector Requirement on NVIDIA Quadro SLI Cards

The SLI connector that links two SLI cards is needed for proper SLI operation. However, the connector can be removed if you do not intend to enable SLI mode. If you remove the connector, then you must make sure that SLI mode is disabled from the NVIDIA control panel. Enabling SLI mode without the SLI connector installed will result in video corruption.

Applying Workstation Application Profiles

► **Background**

The workstation application profiles are software settings used by the NVIDIA Display Drivers to provide optimum performance when using a selected application. The profile also works around known application issues and bugs.

If there is an available setting for an application, it should be used, otherwise incorrect behavior or reduced performance is likely to occur.

► **Issues**

Configuration changes require that you restart the application.

Once an application is running, it does not receive notification of configuration changes. Therefore, if you change the configuration while the application is running, you must exit and restart the application for the configuration changes to take effect.

02 THE RELEASE 418 DRIVER

This chapter covers the following main topics:

- ▶ “Supported Operating Systems” on page 26
- ▶ “Supported NVIDIA Workstation GPUs” on page 26
- ▶ “Supported NVIDIA Notebook GPUs” on page 31
- ▶ “Supported Languages” on page 32
- ▶ “Driver Installation” on page 33

Supported Operating Systems

The Release 418 driver, version 426.50, has been tested with

- ▶ Microsoft Windows® 10, 64-bit

Supported NVIDIA Workstation GPUs

The following tables list the NVIDIA products supported by the Release 418 driver, version 426.50.

- ▶ Table 2.1, “Supported NVIDIA Quadro & NVS Products” on page 27
- ▶ Table 2.2, “Supported NVIDIA Quadro Sync II Products” on page 28
- ▶ Table 2.3, “Supported NVIDIA Quadro Sync Products” on page 28
- ▶ Table 2.4, “Supported NVIDIA Quadro SDI Products” on page 29
- ▶ Table 2.5, “Supported NVIDIA Quadro Blade/Embedded Graphics Board Series” on page 29
- ▶ Table 2.6, “Supported NVIDIA Tesla Products” on page 30

NVIDIA Quadro & NVS Product

Table 2.1 Supported NVIDIA Quadro & NVS Products

Product	GPU Architecture
NVIDIA Quadro RTX 8000	Turing
NVIDIA Quadro RTX 6000	Turing
NVIDIA Quadro RTX 5000	Turing
NVIDIA Quadro RTX 4000	Turing
NVIDIA Quadro GV100	Volta
NVIDIA Quadro GP100	Pascal
NVIDIA Quadro P6000	Pascal

NVIDIA Quadro P5000	Pascal
NVIDIA Quadro P3000	Pascal
NVIDIA Quadro M5000 SE	Maxwell
NVIDIA Quadro M3000 SE	Maxwell
NVIDIA Quadro K3100M	Kepler

NVIDIA Tesla Products

The Tesla driver package is designed for systems that have one or more Tesla products installed.

- Only one GHIC can be connected to the server in a Tesla system.
- This release of the Tesla driver supports CUDA C/C++ applications and libraries that rely on the CUDA C Runtime and/or CUDA Driver API.

Table 2.6 Supported NVIDIA Tesla Products

Product	GPU Architecture

NVIDIA Tesla V100	Volta
Tesla P-Series Products	
NVIDIA Tesla P100	Pascal
NVIDIA Tesla P40	Pascal
NVIDIA Tesla P4	Pascal
Tesla M-Series Products	
NVIDIA Tesla M60	Maxwell
NVIDIA Tesla M6	Maxwell
Tesla K-Series Products	
NVIDIA Tesla K80	Kepler
NVIDIA Tesla K40(m/c/s/st/t)	Kepler
NVIDIA Tesla K20(x/c/m/Xm/s)	Kepler
NVIDIA Tesla K10	Kepler

Supported NVIDIA Notebook GPUs

The notebook driver is part of the NVIDIA Verde Notebook Driver Program, and can be installed on supported NVIDIA notebook GPUs. However, please note that your notebook original equipment manufacturer (OEM) provides certified drivers for your specific notebook on their website. NVIDIA recommends that you check with your notebook OEM about recommended software updates for your notebook. OEMs may not provide technical support for issues that arise from the use of this driver.

The following tables list the NVIDIA notebook products supported by the Release 418 driver, version 426.50:

Table 2.7 NVIDIA Quadro Notebook GPU Support

Notebook Products	GPU Architecture
Quadro P5200	Pascal
Quadro P5000	Pascal
Quadro P4200	Pascal
Quadro P4000	Pascal
Quadro P3200	Pascal

Supported Languages

The Release 418 Graphics Drivers supports the following languages in the main driver Control Panel:

English (USA)	German	Portuguese (Euro/ Iberian)
English (UK)	Greek	Russian
Arabic	Hebrew	Slovak
Chinese (Simplified)	Hungarian	Slovenian
Chinese (Traditional)	Italian	Spanish
Czech	Japanese	Spanish (Latin America)
Danish	Korean	Swedish
Dutch	Norwegian	Thai
Finnish	Polish	Turkish
French	Portuguese (Brazil)	

Driver Installation

Minimum Hard Disk Space

The hard disk space requirement is approximately 1.5x the size of the installation download to accommodate extracted and temporary files.

Before You Begin

nTune

If you have previously installed NVIDIA nTune, NVIDIA recommends that you uninstall nTune before installing this driver. After the driver install is complete, you can reinstall NVIDIA nTune.

Notebooks

- ▶ Check to make sure that your notebook has a supported GPU (see [“Supported NVIDIA Notebook GPUs” on page 31](#)).
- ▶ It is recommended that you back up your current system configuration.
- ▶ If you own a Dell Inspiron 1420, Dell XPS M1330, or Dell XPS M1530, or Dell LatitudeD630 or D630c, it is highly recommended that you first install this [Dell software update](#).

SLI Mosaic Mode

You must make sure SLI Mosaic mode is disabled before installing a new driver over a previously installed driver. If SLI Mosaic mode is active on your displays when you install the new driver, the driver will not install properly.

Installation Instructions

- 1 Follow the instructions on the NVIDIA .com Web site driver download page to locate the appropriate driver to download, based on your hardware and operating system.
- 2 Click the driver download link.
The license agreement dialog box appears.
- 3 Click **Accept** if you accept the terms of the agreement, then either open the file or save the file to your PC and open it later.
- 4 Open the NVIDIA driver installation .EXE file to launch the NVIDIA InstallShield Wizard.

- 5 Follow the instructions in the NVIDIA InstallShield Wizard to complete the installation.

Note: If you are overinstalling the driver (installing over a previous driver without first removing the previous driver), then you must reboot your computer in order to complete the installation.

APPENDIX A NVIDIA TESLA COMPUTE CLUSTER MODE

This chapter describes the Tesla Compute Cluster (TCC) mode.

- ▶ “About Tesla Compute Cluster Mode” on page 35
- ▶ “Operating on Systems with non-TCC NVIDIA GPUs” on page 37
- ▶ “Setting TCC Mode” on page 37

About Tesla Compute Cluster Mode

TCC Overview

Tesla Compute Cluster (TCC) mode is designed for compute cluster nodes that have one or more Tesla or supported Quadro products installed.

Benefits

- ▶ TCC drivers make it possible to use NVIDIA GPUs in nodes with non-NVIDIA integrated graphics.
- ▶ NVIDIA GPUs on systems running the TCC drivers will be available via Remote Desktop, both directly and via cluster management systems that rely on Remote Desktop.
- ▶ NVIDIA GPUs will be available to applications running as a Windows service (i.e. in Session 0) on systems running the Tesla driver in TCC mode.

TCC Does not Support Graphics Acceleration

- TCC mode does not provide CUDA–DirectX/OpenGL interoperability.

It is a “non-display” driver, and NVIDIA GPUs using this driver will not support DirectX or OpenGL hardware acceleration.

Running CUDA Applications

- This release of the Tesla/Quadro driver supports CUDA C/C++ applications and libraries that rely on the CUDA C Runtime and/or CUDA Driver API.
- NVIDIA GPUs running the Tesla/Quadro driver in TCC mode will be available for CUDA applications running via services or Remote Desktop.
- In this release, all GPUs will be in compute exclusive mode. As a result, only one CUDA context may exist on a particular device at a time.
- SDK applications that use graphics will not run properly under TCC mode. The following are examples of CUDA SDK applications that are not supported:

bicubicTexture	boxFilter	cudaDecodeD3D9	smokeParticles
cudaDecodeGL	fluidsD3D9	fluidsGL	SobelFilter
imageDenoising	Mandelbrot	marchingCubes	volumeRender
nbody	oceanFFT	particles	
postProcessGL	recursiveGaussian	simpleD3D10	
simpleD3D10Texture	simpleD3D11Texture	simpleD3D9	
simpleD3D9Texture	simpleGL	simpleTexture3D	

Operating on Systems with non-TCC NVIDIA GPUs

- ▶ NVIDIA GPUs running under TCC mode may coexist with other display devices.
- ▶ The Tesla/Quadro driver is overinstalled over any NVIDIA display driver in the system—the NVIDIA Tesla driver then becomes the only driver for all NVIDIA GPUs in the system.

If the Tesla/Quadro driver is uninstalled at a later time, the previous driver is not restored.

- ▶ NVIDIA GPUs that do not support TCC mode will appear as “VGA adapters” in the Windows Device Manager and can be used to drive displays.

Non-supported NVIDIA GPUs can still function as CUDA devices, but the GPU’s graphics functionality is not available to applications.

Setting TCC Mode

To change the TCC mode, use the NVIDIA **smi** utility as follows:

```
nvidia-smi -g (GPU ID) -dm (0 for WDDM, 1 for TCC)
```

The following table shows the default TCC/non-TCC mode for supported products.

Table A.1 Default TCC Mode

Product	Default Mode
K20Xm/c	TCC
K20m	TCC Off
C2075	TCC
C2050	TCC Off
C2070	TCC Off
S2050	TCC
M2050	TCC
M2070	TCC
M2075	TCC
M2070-Q	TCC Off
M2090	TCC
Quadro (Kepler/Maxwell/Pascal)	TCC Off

Notice

ALL NVIDIA DESIGN SPECIFICATIONS, REFERENCE BOARDS, FILES, DRAWINGS, DIAGNOSTICS, LISTS, AND OTHER DOCUMENTS (TOGETHER AND SEPARATELY, "MATERIALS") ARE BEING PROVIDED "AS IS." NVIDIA MAKES NO WARRANTIES, EXPRESSED, IMPLIED, STATUTORY, OR OTHERWISE WITH RESPECT TO THE MATERIALS, AND EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES OF NONINFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE.

Information furnished is believed to be accurate and reliable. However, NVIDIA Corporation assumes no responsibility for the consequences of use of such information or for any infringement of patents or other rights of third parties that may result from its use. No license is granted by implication of otherwise under any patent rights of NVIDIA Corporation. Specifications mentioned in this publication are subject to change without notice. This publication supersedes and replaces all other information previously supplied. NVIDIA Corporation products are not authorized as critical components in life support devices or systems without express written approval of NVIDIA Corporation.

Macrovision Compliance Statement

NVIDIA Products that are Macrovision enabled can only be sold or distributed to buyers with a valid and existing authorization from Macrovision to purchase and incorporate the device into buyer's products.

Macrovision copy protection technology is protected by U.S. patent numbers 5,583,936; 6,516,132; 6,836,549; and 7,050,698 and other intellectual property rights. The use of Macrovision's copy protection technology in the device must be authorized by Macrovision and is intended for home and other limited pay-per-view uses only, unless otherwise authorized in writing by Macrovision. Reverse engineering or disassembly is prohibited.
